Wetlands abutting waters with Intermittent flow are jurisdictional also, but, as a matter of policy, an SNE (III.C) is provided as justification for the file. Wetlands adjacent to but not directly abutting RPWs (with a surface connection) that flow directly or indirectly into TNWs – These waters may be jurisdictional and therefore, SNE and coordination is required. Complete Sections I, II, III.B.1, III.C, III.D.2, III.D.5 and IV NOTE THAT THERE ARE LIKELY SUCH WETLANDS IN THE EVALUATION OF THE ENTIRE REACH DORDER STREAM. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs – These waters may be jurisdictional and therefore, SNE and coordination is required – Complete Sections I, II, III.B, III.C, III.D.3, III.D.6 and IV
	THIN THE S	TNWs, including territorial seas – These waters are jurisdictional and do not require a SNE or coordination Complete Sections I, II, III.A, III.D.1 and IV. Wetlands adjacent to TNWs – These waters are jurisdictional and do not require a SNE or coordination Complete Sections I, II, III.A, III.D.1 and IV. Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs – Waters with Perennial flow are jurisdictional and do not require a SNE or coordination – Complete Sections I, II, III.D.2 and IV. Waters with Intermittent flow are jurisdictional also, but, as a matter of policy, an SNE (III.C) is provided as justification for the file. Non-RPWs that flow directly or indirectly into TNWs (no adjacent wetlands) – Complete Sections I, II, III.B.1, III.B.3, III.C, III.D.3 and IV – These waters may be jurisdictional and therefore, SNE and coordination is required. Wetlands directly abutting RPWs that flow directly or indirectly into TNWs – Wetlands abutting waters with Perennial flow are jurisdictional and do not require a SNE or coordination – Complete Sections I, II, III.D.2, III.D.4 and IV. Wetlands abutting waters with Intermittent flow are jurisdictional also, but, as a matter of policy, an SNE (III.C) is provided as justification for the file. Wetlands adjacent to but not directly abutting RPWs (with a surface connection) that flow directly or indirectly into TNWs – These waters may be jurisdictional and therefore, SNE and coordination is required. Complete Sections I, II, III.B.1, III.C, III.D.2, III.D.5 and IV NOTE THAT THERE ARE LIKELY SUCH WETLANDS IN THE EVALUATED STREAM REACH, BUT NOT SPECIFIC PERMIT AREA. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs – These waters may be jurisdictional and therefore, SNE and coordination is required – Complete Sections I, II, III.B, III.C, III.D.3, III.D.6 and IV NOTE THAT THERE ARE LIKELY SUCH WETLANDS IN THE EVALUATED STREAM REACH, BUT NOT WITHIN THE SPECIFIC PERMIT AREA.
	THIN THE S	TNWs, including territorial seas – These waters are jurisdictional and do not require a SNE or coordination Complete Sections I, II, III.A, III.D.1 and IV. Wetlands adjacent to TNWs – These waters are jurisdictional and do not require a SNE or coordination Complete Sections I, II, III.A, III.D.1 and IV. Relatively permanent waters (RPWs) that flow directly or indirectly into TNWs – Waters with Perennial flow are jurisdictional and do not require a SNE or coordination – Complete Sections I, II, III.D.2 and IV. Waters with Intermittent flow are jurisdictional also, but, as a matter of policy, an SNE (III.C) is provided as justification for the file. Non-RPWs that flow directly or indirectly into TNWs (no adjacent wetlands) – Complete Sections I, II, III.B.1, III.B.3, III.C, III.D.3 and IV – These waters may be jurisdictional and therefore, SNE and coordination is required. Wetlands directly abutting RPWs that flow directly or indirectly into TNWs – Wetlands abutting waters with Perennial flow are jurisdictional and do not require a SNE or coordination – Complete Sections I, II, III.D.4 and IV. Wetlands abutting waters with Intermittent flow are jurisdictional also, but, as a matter of policy, an SNE (III.C) is provided as justification for the file. Wetlands adjacent to but not directly abutting RPWs (with a surface connection) that flow directly or indirectly into TNWs – These waters may be jurisdictional and therefore, SNE and coordination is required. Complete Sections I, II, III.B.1, III.C, III.D.2, III.D.3 and IV NOTE THAT THERE ARE LIKELY SUCH WETLANDS IN THE EVALUATED STREAM REACH, BUT NOT SPECIFIC PERMIT AREA. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs – These waters may be jurisdictional and therefore, SNE and coordination is required – Complete Sections I, II, III.B., III.C, III.D.3, III.D.6 and IV NOTE THAT THERE ARE LIKELY SUCH WETLANDS IN THE EVALUATED STREAM REACH, BUT NOT

¹ For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

Isolated (interstate or intrastate) waters, including isolated wetlands – A <u>SNE is not required but coordinationwith EPA</u> and HQ is required Complete Sections I, II, III.E and IV
Note: If a determination is made that no SN exists, then complete Section III.F and coordinate with EPA
 b. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: Yellow Breeches Creek, within bed and banks linear feet: 900 If width (ft) app. 100 ft in width and/or acres. Wetlands: 0 acres.
c. Limits (boundaries) of jurisdiction based on: Pick Listn Established by OHWM Elevation of established OHWM (if known):409 ft above msl.
2. Non-regulated waters/wetlands (check if applicable): Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: . Go to Section III.F
SECTION III: CWA ANALYSIS
TNWs AND WETLANDS ADJACENT TO TNWs
The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and and Section III.D.1.; otherwise, see Section III.B below.
1. TNW Identify TNW:
Summarize rationale supporting determination: .
2. Wetland adjacent to TNW Summarize rationale supporting conclusion that wetland is "adjacent":
CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):
This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps

В.

determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is <u>adjacent</u> to but that <u>does not directly abut</u> an RPW requires a significant nexus evaluation. <mark>Corps</mark> districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a <u>relatively permanent tributary that is not perennial</u> (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody³ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

Characteristics of non-TNWs that flow directly or indirectly into TNW

General Area Conditions:

A.

Watershed size: square miles

² Supporting documentation is presented in Section III.F.

³ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West

Drainage area: square miles Average annual rainfall: inches Average annual snowfall: inches (ii) Physical Characteristics: (a) Relationship with TNW: Tributary flows directly into TNW. Tributary flows through **Pick List** tributaries before entering TNW. Project waters are **Pick List** river miles from TNW. Project waters are **Pick List** river miles from RPW. Project waters are **Pick List** aerial (straight) miles from TNW. Project waters are **Pick List** aerial (straight) miles from RPW. Project waters cross or serve as state boundaries. Explain: Identify flow route to TNW⁴: Tributary stream order, if known: (b) General Tributary Characteristics (check all that apply): Tributary is: Natural Artificial (man-made). Explain: Manipulated (man-altered). Explain: **Tributary** properties with respect to top of bank (estimate): Average width: feet Average depth: feet Average side slopes: Pick List. Primary tributary substrate composition (check all that apply): Silts Sands Concrete Cobbles Muck Gravel Bedrock Vegetation. Type/% cover: Other. Explain: Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: Presence of run/riffle/pool complexes. Explain: Tributary geometry: Pick List Tributary gradient (approximate average slope): % Tributary provides for: Pick List Estimate average number of flow events in review area/year: Pick List Describe flow regime: Other information on duration and volume: Surface flow is: Pick List. Characteristics: Subsurface flow: **Pick List**. Explain findings: Dye (or other) test performed: Tributary has (check all that apply): Bed and banks OHWM⁵ (check all indicators that apply): clear, natural line impressed on the bank the presence of litter and debris changes in the character of soil destruction of terrestrial vegetation shelving the presence of wrack line vegetation matted down, bent, or absent sediment sorting leaf litter disturbed or washed away scour sediment deposition multiple observed or predicted flow events water staining abrupt change in plant community other (list):

⁴ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

⁵A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

			☐ Discontinuous OHWM. ⁶ Explain:
			If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply): High Tide Line indicated by:
	(iii)		emical Characteristics: racterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
			Explain:
	(iv)	Biol	Riparian corridor. Characteristics (type, average width): Wetland fringe. Characteristics: Habitat for: Federally Listed species. Explain findings: Other environmentally-sensitive species. Explain findings: Aquatic/wildlife diversity. Explain findings:
2.	Cha	aract	eristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW
	(i)		Sical Characteristics: General Wetland Characteristics: Properties: Wetland size: acres Wetland type. Explain: Wetland quality. Explain:
		(b)	Project wetlands cross or serve as state boundaries. Explain: General Flow Relationship with Non-TNW: Flow is: Pick List. Explain: Surface flow is: Pick List Characteristics:
			Subsurface flow: Pick List . Explain findings: Dye (or other) test performed:
		(c)	Wetland Adjacency Determination with Non-TNW: ☐ Directly abutting ☐ Not directly abutting ☐ Discrete wetland hydrologic connection. Explain: ☐ Ecological connection. Explain: ☐ Separated by berm/barrier. Explain: ☐ .
		(d)	Proximity (Relationship) to TNW Project wetlands are Pick List river miles from TNW. Project waters are Pick List aerial (straight) miles from TNW. Flow is from: Pick List. Estimate approximate location of wetland as within the Pick List floodplain.
	(ii)	Cha	emical Characteristics: racterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: httify specific pollutants, if known:
	(iii)	Biol	Riparian buffer. Characteristics (type, average width): Vegetation type/percent cover. Explain:

⁶Ibid.

	Habitat for:
	Federally Listed species. Explain findings:
	Fish/spawn areas. Explain findings:
	Other environmentally-sensitive species. Explain findings:
	Aquatic/wildlife diversity. Explain findings:
	
3.	Characteristics of all wetlands adjacent to the tributary (if any)
	All wetland(s) being considered in the cumulative analysis: Pick List
	Approximately () acres in total are being considered in the cumulative analysis.
	For each wetland, specify the following:
	Directly abuts? (Y/N) Size (in acres) Directly abuts? (Y/N) Size (in acres)
	Summarize overall biological, chemical and physical functions being performed:

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- 1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:
- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
- 3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

ADDITIONAL HQ REQUESTED INFO

- 1. the beginning and end points of the specific reach being evaluated for significant nexus,
- 2. the approximate points where the RPW begins and the TNW begins,
- 3. what criteria supports a TNW determination or the lack thereof,
- 4. what criteria supports significant nexus call or the lack thereof,
- 5. the project boundaries,
- 6. the general flow patterns, volume and frequency,

7. what areas are being considered as the drainage and watershed areas, 8. existing conditions of the area surrounding the areas being evaluated.

Please include all applicable maps, topos, photos and diagrams that would assist HQ and EPA in their review of these resources.

D.	DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):				
	1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: ☐ TNWs: linear feet width (ft), Or, acres. ☐ Wetlands adjacent to TNWs: acres.			
	2.	RPWs that flow directly or indirectly into TNWs. FOR THE STREAM ONLY ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Yellow Breeches Creek is a perennial waterway supporting a wild trout and stocked trout recreational fishery at this location. ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributar flows seasonally: ☐ SNE REQUIRED FOR THIS CASE AS BACKUP INFO			
		Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: 850 linear feet 100 width (ft). Other non-wetland waters: acres. Identify type(s) of waters: .			
	3.	Non-RPWs ⁷ that flow directly or indirectly into TNWs. Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.			
		Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wetland waters: acres. Identify type(s) of waters: .			
	4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. FOR THE WETLANDS Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:			
		■ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: . SNE REQUIRED FOR THIS CASE AS BACKUP INFO			
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.			
	5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.			
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.			
	6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.			
		Provide estimates for jurisdictional wetlands in the review area: acres.			

6

⁷See Footnote # 3.

	As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. Demonstrate that impoundment was created from "waters of the U.S.," or Demonstrate that water meets the criteria for one of the categories presented above (1-6), or Demonstrate that water is isolated with a nexus to commerce (see E below).	
E.	SOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY UCH WATERS (CHECK ALL THAT APPLY): which are or could be used by interstate or foreign travelers for recreational or other purposes. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce, which are or could be used for industrial purposes by industries in interstate commerce. Interstate isolated waters. Explain: Other factors. Explain:	
	dentify water body and summarize rationale supporting determination: rovide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wetland waters: acres. Identify type(s) of waters: Wetlands: acres.	
F.	IGNIFICANT NEXUS IS DETERMINED If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements. Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce. Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR). Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: Other: (explain, if not covered above):	
	rovide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR actors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional adgment (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: acres. Other non-wetland waters: acres. List type of aquatic resource: Wetlands: acres.	<mark>d</mark>

B. ADDITIONAL COMMENTS TO SUPPORT JD: The project is confined within the bed and banks of Yellow Breeches Creek, a perennial waterway. Interstate and international commerce are supported by recreational wild and stocked trout fisheries, recreational boat launch on site, and historical accounts of commerce pursued via primitive watercraft in precolonial and colonial periods. Commerce is also supported by various water supply intakes and waste water outfalls that service a variety of industries in the region which are engaged in interstate commerce.
